

Keeco Care & Maintenance Tips

Proper care and maintenance can dramatically increase the longevity of all bed products. Follow some of these tips to extend product life.

Use pillow and/or comforter protectors.

Fluff products daily.

DO NOT OVERFILL dryers.

Overfilled dryers and high heats can result in dryer fires.

Spot clean frequently and launder when necessary.

Harsh chemicals may weaken fabric & fill which can cause product failure.

Check inside of washers & dryers for sharp objects that may snag/or rip your bedding products.

Use the 10am/2pm rule for washing & drying so that you can see products falling at the 10am and 2pm positions through the machine window.

Adding clean tennis or dryer balls (wrapped in clean white socks to prevent color transfer) during the drying cycle can decrease drying times.

Double check the center and all corners for dampness to be sure the product is completely dry.
